Overview

LSware maintains a strong sense of duty to its customers and is committed to delivering the best in information protection solutions.

CEO's Message

At LSware, our company motto is “We are here to provide a system to the customers to use it in a freer environment.” In order to realize this motto, all of us at Lsware believe in implementing our management philosophies (honesty, passion, sharing, friendship, & value) while continuously growing as a family and with our customers.

All of LSware employees promise to put our hearts and soul into completing the mission given by our customers through continuous research & development and technical supports. Our end goal is to be the system solutions partner needed by our customers.

In 2009, we locally produced server security products Omniguard so customers were able to replace imported products with locally designed system protection. We will continue implementing the latest and most dependable technologies to satisfy our customers' needs and become one of the top 50 global system software companies by year 2020.

In the future, LSware will continue...
to learn through our past,
to make our best efforts in the present, and
to prepare for the future,
as a single entity.

We thank our customers for their interest and support in our challenges to realize the LSware vision and management philosophies.

Minsoo (Lasarus) Kim
CEO, LSWARE Inc.

system

Vulnerability Assessment and Management System

| SecuMS™ (Vulnerability Assessment and Management System)

- SecuMS automatically monitors system's security vulnerabilities, and offers solutions for discovered issues to provide an overview of vulnerabilities for each server.
- It provides continuous monitoring of security levels and a true **Constant Security Vulnerability Assessment and Management**.

The Next Generation Server Security System

Omniguard(The Next Generation Server Security System)

- Omniguard provides account management/access control/session logging/audit trail and privilege managemt/order word control and other features per module, minimizes OS influence, and there is no need for Kernel alteration, which makes it **The Next Generation Server Security System.**

Open Source SW License Compliance

FOSSGuard™ (Open source SW license compliance system)

- FOSSGuard extracts the characteristics from distributed open source software's source codes to obtain unique data. The system then compares them with the source codes of the software in development to provide **Similarity & Relevant License Information on the Source Code.**

FOSS Guard

Recognition & Awards

LSware has garnered trust from clients and partners through 3rd party validations such as patents and multiple awards.
